## Adjustable Flow Control Valves

The W-1900 is a pressure compensated adjustable flow control valve. By rotating the handle, the flow out the "CF" or controlled flow port can be varied within the range given in the chart below. Any remaining flow is bypassed to the "EF" or excess flow port. This flow can be used to power another circuit or can be returned to tank. Once the controlled flow is set, it will remain nearly constant with variations in pressure on either the controlled or excess flow ports. Please note, if during operation the controlled flow port is blocked, the valve will compensate in such a way as to shut off flow to the excess port.

This valve can also be used as a restrictive flow control by plugging the excess flow port.

The WR-1900 has a built-in adjustable pressure relief. For this model, the excess flow port **must** be connected to tank. It should be noted that whenever this or any valve is used to bypass or restrict flow, heat will be generated. Steps may be required to keep oil temperature from becoming too high.

### RELIEF PRESSURE INFORMATION:

Inlet relief protection available on "WR" models. Relief pressure preset at 1500 PSI and is adjustable from 1250 to 3000 PSI. To adjust, remove acorn nut, turn adjusting screw clockwise to increase pressure, counterclockwise to reduce pressure. Reinstall acorn nut after adjusting. Use a pressure gauge when making adjustments.

### VALVE SPECIFICATIONS

- 30 GPM max flow
- 3000 PSI max
- 180° F max temp
- Filtration 17/14/19
- For use with mineral based hydraulic fluid
- Side port configuration
- 100% Tested
- External seals on rotary spool prevent contamination from locking up spool
